

# Onshore

## Shipulse Portal

Hosted on the cloud, Shipulse™ Portal provides complete vessel and fleet management on one single platform. Real-time fuel consumption data and other vessel activity insights are delivered with accuracy from vessel to shore, allowing onshore staff to monitor fuel usage and track vessel performance during operations remotely.

### Who Is It For

- Ship owners, ship operators and commercial representatives who want to make proactive decisions on vessel efficiency

### Features

- Access to critical real-time information of vessel performance with on-demand reports
- Performance insights to benchmark within fleet and with competitors

The portal is equipped with customisable tracking and monitoring functions for complete vessel management, enabling proactive decision making on vessel efficiency that translates to better opportunities for cost savings. Vessel optimisation and management is just at your fingertips.

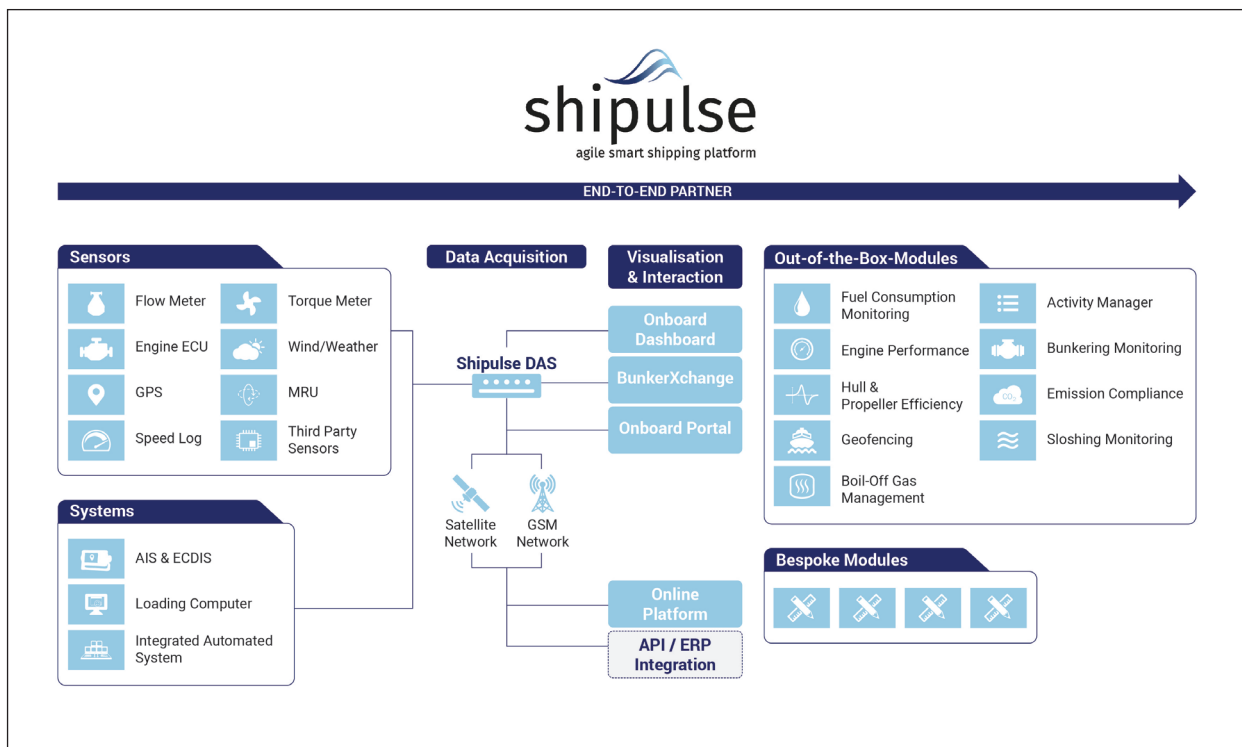

**The Shipulse™ Portal provides an easy one-stop access to view all vessel operations and solutions from analysis, which includes modules like:**

- Fuel Consumption Monitoring
- Activity Manager Add On
- Engine Performance
- Bunkering Monitoring
- Hull & Propeller Efficiency
- Emission Compliance
- Geofencing
- Boil-Off Gas Management
- Sloshing Monitoring
- Application Programming Interface (API) integration, such as streaming live video feed and alarm monitoring

For more information on individual modules, please visit [www.ascenz.com](http://www.ascenz.com)

**Shipulse Portal also includes features to allow users to:**

- Generate charts from key metrics for vessel performance analysis
- Export of raw data to carry out further diagnostics
- Customise view to suit corporate functionality
- Define and set personalised threshold to monitor KPI

**How To Get It**
